COURSE INFORMATION

OVERVIEW

Crohn's disease and ulcerative colitis, collectively known as Inflammatory Bowel Disease (IBD), are considered chronic and lifelong conditions that are characterized by alternating periods of active symptomatic disease and periods of remission. IBD is one of the five most prevalent gastrointestinal disease burdens in the United States, with an overall health care cost of more than \$1.7 billion and it is estimated that more than one million people in the United States are affected by the disease. Because IBD is a lifelong condition, the importance of establishing and maintaining symptom control and remission is critical to minimizing complications. The treatment of active IBD has improved considerably, but a high rate of relapse is still associated with the disease, and maintaining remission can prove challenging to providers.

The New Advances in Inflammatory Bowel Disease conference will highlight the latest concepts in the diagnosis and treatment of IBD. Disease complications, social and psychological side effects, special population considerations, and surgical options will also be discussed. The course will be taught by nationally known experts who are actively involved in clinical trials and studies related to the management of Crohn's and colitis. Physicians will be provided with the necessary context to integrate the relevant information into their practices to improve the quality of life for their afflicted patients.

TARGET AUDIENCE

This course is designed for gastroenterologists, gastroenterology nurses, internists, colorectal surgeons and allied health professionals involved in the care of patients with Inflammatory Bowel Disease (IBD).

EDUCATIONAL OBJECTIVES

After attending this activity, participants should be able to:

- Summarize recent clinical trial data regarding the next generation of therapies in inflammatory bowel disease
- Incorporate new diagnostic methods into practice for inflammatory bowel disease
- Evaluate current and future treatment and therapy options for inflammatory bowel disease
- Assess surgical options for the treatment of inflammatory bowel disease
- Appraise the role of biologics in the treatment of inflammatory bowel disease
- Recognize the various social and psychological side effects of patients and utilize psychosocial tools in the management of inflammatory bowel disease

NEW PATIENT EDUCATION TRACK

This two hour comprehensive educational program for patients and families will provide you with the most current medical and surgical approaches to IBD, presented by leading experts.

WHO SHOULD ATTEND THE PATIENT EDUCATION TRACK?

This activity has been planned for patients and family members affected by inflammatory bowel disease as well as other persons in the healthcare community with an interest in the treatment and management of patients with IBD.

ABOUT SCRIPPS

Scripps Health, a nonprofit health care system based in San Diego, California, includes more than 2,600 affiliated physicians and over 13,000 employees at five acute-care hospital campuses, home health care services and a network of clinics, physician offices and outpatient centers. Scripps is committed to contributing to the future of medicine through its clinical research trials, graduate medical education and continuing medical education programs.
