Course Overview
Scripps Health’s Primary Care Summer Conference was designed by primary care physicians for primary care physicians and their care team and will present content from their unique perspective. The 2021 course will feature important updates in infectious disease, stroke, and sleep disorders. Current treatments for migraine and heart failure will be discussed as well as dermatology updates and tools for reducing bias and creating an LGBTQ inclusive practice. In addition to an overview of the history and current science of a variety of specialty areas, content will be presented in a very practical, patient-focused manner relevant to the specific primary care setting and challenges.

Educational Objectives
After attending this live activity, participants should be able to:
- Integrate current trends in preventive health care into patient care strategies.
- Employ new collaborative care team strategies that enhance the prevention, diagnosis and management of various medical conditions encountered in the office practice.
- Effectively discuss with patients their personal responsibilities in prevention and treatment.
- Access and/or recommend resources for both physicians and patients to acquire additional information pertinent to a range of therapeutic areas.
- Manage the specialist referral process: assess when to refer, recognize what the specialized treatment will consist of, and determine the role of the primary care physician in cohesive care and follow-up.
