

SCRIPPS HEALTH/SCRIPPS CLINIC BIO-REPOSITORY AND BIO-INFORMATICS CORE

**Ali Martin, CPT1
Research Assistant**

Ali Martin has four years of experience working in the clinical lab as a phlebotomist and lab assistant. She received her certification as a California Certified Phlebotomy Technician after attending a training program through San Diego Family Health Training Services (now known as PhlebotomyU). After her initial training at Scripps Clinic, Torrey Pines, in the clinical lab, she underwent training in the research clinical lab. For two years she ran the research clinical lab at Scripps Clinic, working closely with Scripps Clinical Research Services. During her tenure in the lab, Ali worked primarily on various oncology and hepatology studies. She managed the entire process and flow of the research lab, ensuring it was running at maximum efficiency. Ali performed the blood draw and blood processing specifically according to each individual protocol and made sure the quality of the specimens was to the highest standards.

After running the research lab for two years, she had the opportunity to expand her research knowledge by working for the Scripps Bio-Repository and Bio-Informatics Core and Transplantation Research group. At the bio-repository she has expanded her skills to perform the specific collecting and processing requirements for each individual specimen that is received as well as collecting the required data on each sample.
